

Youtube breakdown version 1

Youtube breakdown version 2

Think in Boxes [Youtube]

How I brakedown Youtube website and show the set of blocks. Like headers, Navigation, Main sections and the smaller elements like icons. Box color I used to represent each box.

```
const boxColor = {  
  "green": "big box",  
  "yellow": "medium box",  
  "red": "small box",  
}
```

First thing I do is identify the big blocks which are Header, Navigation, and Main section. As you can see in the *[Youtube breakdown version 1]* the color green box represents the large boxes or section in the youtube. Large box contain both medium and small elements.

Then I find which part of the large box can be sectioned in the *[Youtube breakdown version 1]* the color yellow box represents the medium boxes like the navigation containers, video item, navigation & logo container, search container, account container. This containers hold smaller elements like btn, logo, and texts.

And lastly I identify the smaller elements in the *[Youtube breakdown version 1]* the red yellow box represents the small box elements like like buttons, icons, texts, images.

Finally as you can see in the *[Youtube breakdown version 2]* this is what youtube would look like with just Boxes.
